Capability Statement

RECLAIM
SOLARENERGY

ABOUT

Reclaim Solar Energy is unashamedly passionate about renewables, and with over a decade of industry experience, has established itself as a leader in both small and large-scale projects. Our extensive network spans diverse sectors, bringing together a wealth of professional expertise. We offer a comprehensive range of services, including:

- Solar Installations - Residential / Commercial / Industrial / Construction / Community Living
- Solar and Battery Hybrid Combinations
- Large-Scale Energy and Renewables Consulting
- Engineering Design for Large-Scale Solar Systems
- High Voltage Consulting
- PPA and VPP/ Micro Grid Consulting and Installation
- Community Living Solar Consulting and Installation

We are proud to leverage significant industry experience to enhance every project we undertake. Collaborating with industry experts ensures that we not only meet but exceed expectations in delivering solar programs. Our passion for renewable energy drives us to seek out opportunities for impactful change.

At Reclaim Energy, our reputation is grounded in trust, integrity, and client satisfaction. We aspire to create a legacy that is sustainable for future generations.

CORE VALUES

HONESTY AND INTEGRITY

We will do the right thing when no one is watching.

This is part of who we are.

We will work hard to earn and reciprocate trust.

ACCOUNTABILITY

We will always take responsibility for our decisions and actions. We will create learning opportunities, share successes and progress toward achieving great outcomes for all.

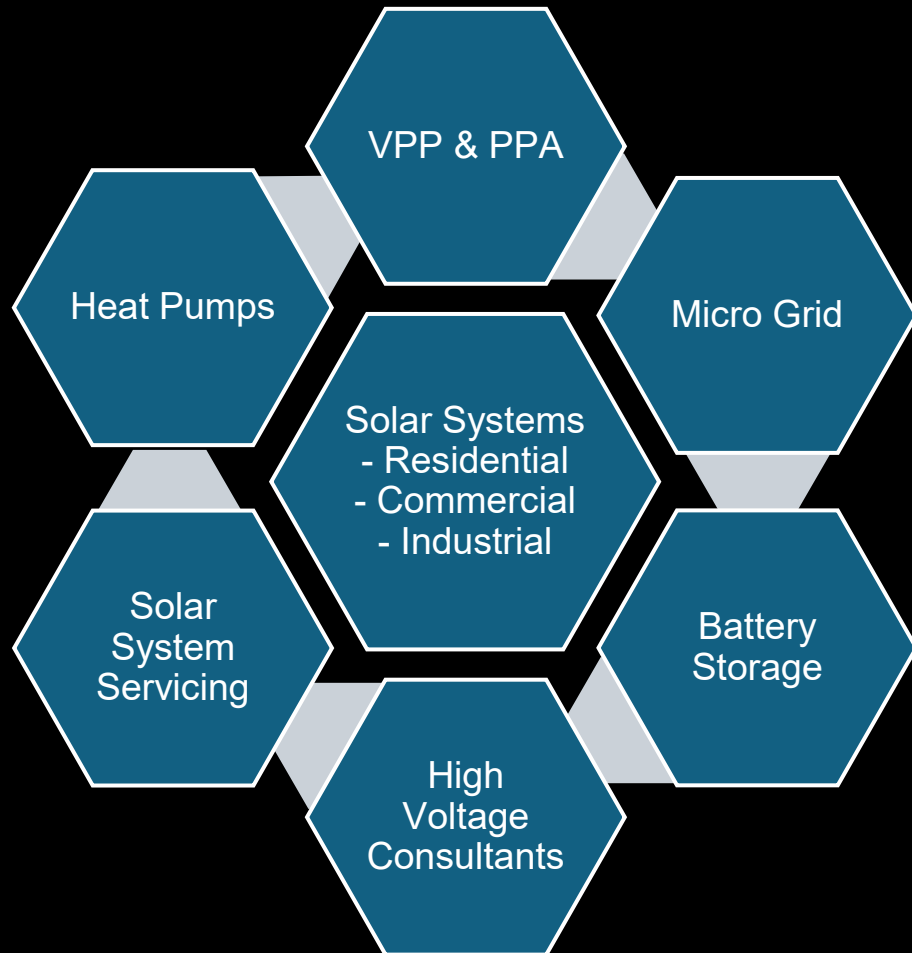

CORE COMPETENCIES

At Reclaim Solar Energy, we offer comprehensive design and construction services that cater to projects of all sizes, from residential developments to large-scale initiatives. With decades of experience, we ensure successful outcomes through our expertise in:

- Residential and Commercial Projects
- Tailored solutions to meet diverse needs
- Large-Scale Projects
- Proven ability to integrate with the grid efficiently and effectively.
- Specialists who navigate complex regulatory environments while prioritizing sustainability
- On-Site Management
- Dedicated teams ensuring smooth project execution
- In-House Project Managers
- Skilled professionals overseeing every detail, from planning to completion

Our commitment to excellence guarantees that each project meets the highest standards while aligning with our vision for a sustainable future.

Andy Leadbeatter – Managing Director

Nathan Ryan – Commercial Sales

Lauren Harbrow – Residential & Marketing

Donelle Aitchison – Accounts Manager

Helen Luck – Administration Manager

COMMERCIAL PROJECTS

From multi-residential community installations, through to large industrial commercial solar system, Reclaim Solar Energy has delivered significant solar installations throughout the greater Hunter region and continues to expand its relationships and geographic reach.

The significant partnership with Second Life Solar will increase the awareness in the Circular Economy and allow large utility scale projects to take advantage of this initiative.

CASE STUDY

Hills Tankers Cuts Energy Costs to Boost Profitability Case Study

“Competing successfully in the road transport industry requires constant vigilance in the management of business overheads.

Energy is a significant component in the overheads for many businesses, including ours.

Reclaim Solar Energy has helped us make a significant, and consistent reduction in our energy costs.” Andrew Hill – Managing Director

At a Glance

Challenge

Controlling business overhead costs in highly competitive road transport industry

Benefits

Consistent energy savings
Return on Investment in 4 years

The Scenario

Hills Tankers operate a large truck washing operation in Beresfield and with pumps, compressors, air conditioners and general office equipment running all day, the energy costs of this business were not small.

Additional to this, there was an understanding at Hills Tankers, that the huge generator could not be disconnected from the mains.

This also formed part of the scope and exploration for energy solutions.

The Solution

Following a series of critical site visits and the detailed analysis of the current energy bills and Interval Data*, it was determined that an 82kW solar system would provide the best outcome for the business.

The Results

A conservative estimate suggested that savings of around \$15,000.00 per annum would be achieved and a ROI of under 6 years.

Installed in June 2020, the savings in just one year sit around \$19,000.00

This would see the ROI reduce to just over 4 years.

* Interval Data is energy that is measured in equal increments, providing accurate time of use information.

AFFILIATIONS and PARTNERSHIPS

Being affiliated means we can cross promote businesses, refer unrelated business, and also give back to the community .

Giving is gain...this is part of who we are.
